Josef Albers (1888–1976) was an artist, teacher, and seminal thinker on the perception of color. A member of the Bauhaus who fled to the U.S. in 1933, his ideas about how the mind understands color influenced generations of students, inspired countless artists, and anticipated the findings of neuroscience in the latter half of the twentieth century. With contributions from the disciplines of art history, the intellectual and cultural significance of Gestalt psychology, and neuroscience, *Intersecting Colors* offers a timely reappraisal of the immense impact of Albers's thinking, writing, teaching, and art on generations of students. It shows the formative influence on his work of non-scientific approaches to color, notably the work of Johann Wolfgang von Goethe and the emergence of Gestalt psychology in the first decades of the twentieth century. The work also shows how much of Albers's approach to color, dismissed in its day by a scientific approach to the study and taxonomy of color driven chiefly by industrial and commercial interests, ultimately anticipated what neuroscience now reveals about how we perceive this most fundamental element of our visual experience. Edited by Vanja Malloy, with contributions from Brenda Danilowitz, Sarah Lowengard, Karen Koehler, Jeffrey Saletnik, and Susan R. Barry.

This book peers into the concept of conservation under the framework of sustainability. The world's architectural history is in danger due to a lack of understanding, expertise, and care. Some monuments have already been lost, and more are under threat. Heritage needs to be well understood, interpreted, defined, and managed for future generations, as it provides communities and cultures with retrospection and contributes to recorded history. Additionally, it discusses the relationship between cultural heritage preservation and sustainable development, as well as restoration efforts for tangible and intangible cultural heritage assets. The book aims to assist professionals working in the field of heritage conservation, whether it is cultural, rural, architectural, tangible, or intangible. It stands to be a valuable resource for architects and engineers, as well as for conservators, archaeologists, environmentalists, and policy makers.
